PROJECT SCOPE INFORMATION

Project Overview

This project is a single page Student Project Showcase website. The goal is to present multiple student projects in a clean, modern, and responsive layout using the provided static project data.

What You Will Receive

You will receive a JSON file containing all project information including project titles, categories, descriptions, team names, student members, and tech stacks. This JSON file is the only data source for the website.

Scope of Work

Build a responsive single page website using the provided JSON data.

The page must include:

- Hero section introducing the showcase
- Project grid displaying project cards dynamically from the JSON file
- Each card showing project title, category, and description preview
- Category filter buttons working fully on the client side
- Simple header navigation with anchor links
- Footer with basic information
- Smooth scrolling between sections
- Clean typography and modern spacing
- Responsive layout for desktop and mobile screens

Technical Requirements

- All data must remain static and loaded from the provided JSON file
- Filtering must be client side only
- No backend or database usage
- No CMS setup
- No authentication or admin panels
- Deliverable should be working frontend files or a live preview link

Not Included in Scope

- Backend development
- Hosting setup

API integrations

User accounts or login systems

Content management systems

Assets Provided

Student projects JSON file

Category list inside the JSON

All required textual content

Expected Deliverable

A fully working responsive webpage that correctly displays and filters the provided project data.
